Projects

Blockchain-Based E-commerce Platform – Blocmerce

Final Year Project | Sep 2024 - May 2025

<https://github.com/Abuzarsheik/Blockchain-Ecommerce>

Tools: Frontend: HTML, CSS, JavaScript, Bootstrap Blockchain: Solidity, Remix IDE, Ethereum (Testnet) Wallet Integration: MetaMask Version Control: Git, G

- Designed and developed a decentralized e-commerce platform integrating blockchain for secure transactions, fraud prevention, and transparent order management.
- Implemented an escrow system using smart contracts to hold payments until buyer confirmation, reducing the need for traditional banking intermediaries.
- Focused on frontend development using HTML, CSS, and JavaScript (or React – update based on your stack), ensuring a responsive and user-friendly interface.
- Collaborated with a team to define system architecture, develop the user flow, and plan integration with a cryptocurrency exchange.
- Gained hands-on experience with blockchain fundamentals, smart contract logic, and the intersection of fintech and web development.

Created a Website to watch anime

We worked together to make a cool website where you can watch lots of anime. I helped build parts of the site that let you log in, find shows easily, and play them smoothly. We listened to feedback and kept improving it until it was awesome. It was a fun project that taught me a lot about making websites and working with a team

School bus system Database

In our project, we made a digital system to keep track of school buses. It had info about each bus like its number, how many kids it could carry, and when it needed maintenance. We also put in details about bus routes and stops, so schools could plan better. Plus, we had a list of all the students who ride the bus and their emergency contacts. It made things easier and safer for everyone involved in school transportation.
